Tracking Tyrannosaurs: Meet T. rex's fascinating family, from tiny terrors to feathered giants (National Geographic Kids) Christopher Sloan

This book highlights a newly discovered T. rex relative in China with a coat of downy feathers! This one-ton predator is the largest known animal to ever have walked the Earth. This discovery was made public in April 2012, and is a timely addition that sets this book apart from other dinosaur titles.

We meet 19 kinds of tyrannosaurs--including seven new species discovered in the last two years--that came before T. rex. The names are strange, like *Bistahieversor* and *Zhuchengtyrannus*. The creatures were strange, too, and many of the newly discovered ones caught scientists by surprise.

Filled with engaging, lifelike illustrations by Xing Lida, *Tracking Tyrannosaurs* explains to kids how T. rex, the most famous, ferocious dinosaur of all-time was only one of many tyrannosaurs that lived on Earth for over 100 million years!
