Ted G. Lewis

Critical Infrastructure Protection in Homeland Security: Defending a Networked Nation Ted G. Lewis
A scientific approach to the new field of critical infrastructure protection This book offers a unique scientific approach to the new field of critical infrastructure protection: it uses network theory, optimization theory, and simulation software to analyze and understand how infrastructure sectors evolve, where they are vulnerable, and how they can best be protected. The author demonstrates that infrastructure sectors as diverse as water, power, energy, telecommunications, and the Internet have remarkably similar structures. This observation leads to a rigorous approach to vulnerability analysis in all of these sectors. The analyst can then decide the best way to allocate limited funds to minimize risk, regardless of industry sector. The key question addressed in this timely book is: What should be protected and how? The author proposes that the answer lies in allocating a nation's scarce resources to the most critical components of each infra-structure--the so-called critical nodes. Using network theory as a foundation, readers learn how to identify a small handful of critical nodes and then allocate resources to reduce or eliminate risk across the entire sector. A comprehensive set of electronic media is provided on a CD-ROM in the back of the book that supports in-class and self-tutored instruction. Students can copy these professionally produced audio-video lectures onto a PC (Microsoft Windows(r) and Apple Macintosh(r) compatible) for repeated viewing at their own pace. Another unique feature of the book is the open-source software for demonstrating concepts and streamlining the math needed for vulnerability analysis. Updates, as well as a discussion forum, are available from www.CHDS.us. This book is essential for all corporate, government agency, and military professionals tasked with assessing vulnerability and developing and implementing protection systems. In addition, the book is recommended for upper-level undergraduate and graduate students studying national security, computing, and other disciplines where infrastructure security is an issue.

From reader reviews:

Linda Pinkerton:

Book is actually written, printed, or illustrated for everything. You can know everything you want by a publication. Book has a different type. As it is known to us that book is important matter to bring us around the world. Alongside that you can your reading skill was fluently. A reserve Critical Infrastructure Protection in Homeland Security: Defending a Networked Nation will make you to always be smarter. You can feel considerably more confidence if you can know about every little thing. But some of you think that open or reading the book make you bored. It's not make you fun. Why they could be thought like that? Have you trying to find best book or ideal book with you?

Ruth Davis:

Reading a reserve can be one of a lot of activity that everyone in the world enjoys. Do you like reading book so. There are a lot of reasons why people like it. First reading a publication will give you a lot of new details. When you read a publication you will get new information mainly because book is one of several ways to share the information or even their idea. Second, examining a book will make you actually more imaginative. When you studying a book especially tale fantasy book the author will bring someone to imagine the story how the personas do it anything. Third, you may share your knowledge to other people. When you read this Critical Infrastructure Protection in Homeland Security: Defending a Networked Nation, you can tells your family, friends along with soon about yours reserve. Your knowledge can inspire others, make them reading a e-book.

James Butler:

Many people spending their period by playing outside having friends, fun activity along with family or just watching TV all day every day. You can have new activity to enjoy your whole day by examining a book. Ugh, ya think reading a book can really hard because you have to use the book everywhere? It all right you can have the e-book, taking everywhere you want in your Smart phone. Like Critical Infrastructure Protection in Homeland Security: Defending a Networked Nation which is having the e-book version. So , try out this book? Let's notice.

Betty Bass:

What is your hobby? Have you heard that will question when you got students? We believe that that problem was given by teacher to the students. Many kinds of hobby, Every individual has different hobby. And also you know that little person such as reading or as reading through become their hobby. You should know that reading is very important and also book as to be the matter. Book is important thing to add you knowledge, except your own teacher or lecturer. You discover good news or update in relation to something by book. Different categories of books that can you decide to try be your object. One of them is niagra Critical Infrastructure Protection in Homeland Security: Defending a Networked Nation.
