Modern Optical Spectroscopy: With Exercises and Examples from Biophysics and Biochemistry

William W. Parson

This textbook offers clear explanations of optical spectroscopic phenomena and shows how spectroscopic techniques are used in modern molecular and cellular biophysics and biochemistry. The topics covered include electronic and vibrational absorption, fluorescence, resonance energy transfer, exciton interactions, circular dichroism, coherence and dephasing, ultrafast pump-probe and photon-echo spectroscopy, single-molecule and fluorescence-correlation spectroscopy, Raman scattering, and multiphoton absorption. This revised and updated edition provides expanded discussions of quantum optics, metal-ligand charge-transfer transitions, entropy changes during photoexcitation, electron transfer from excited molecules, normal-mode calculations, vibrational Stark effects, studies of fast processes by resonance energy transfer in single molecules, and two-dimensional electronic and vibrational spectroscopy.

The explanations are sufficiently thorough and detailed to be useful for researchers and graduate students and advanced undergraduates in chemistry, biochemistry and biophysics. They are based on time-dependent quantum mechanics, but are developed from first principles with a clarity that makes them accessible to readers with little prior training in this field. Extra topics and highlights are featured in special boxes throughout the text. The author also provides helpful exercises for each chapter.

From reader reviews:

Daniel Grinder:

What do you think about book? It is just for students since they are still students or the item for all people in the world, the actual best subject for that? Just you can be answered for that query above. Every person has diverse personality and hobby for each other. Don't to be obligated someone or something that they don't want do that. You must know how great in addition to important the book Modern Optical Spectroscopy: With Exercises and Examples from Biophysics and Biochemistry. All type of book can you see on many sources. You can look for the internet resources or other social media.

Joe Lowe:

Now a day those who Living in the era everywhere everything reachable by talk with the internet and the resources inside can be true or not need people to be aware of each information they get. How individuals to be smart in acquiring any information nowadays? Of course the reply is reading a book. Looking at a book can help individuals out of this uncertainty Information mainly this Modern Optical Spectroscopy: With Exercises and Examples from Biophysics and Biochemistry book as this book offers you rich information and knowledge. Of course the knowledge in this book hundred per cent guarantees there is no doubt in it as you know.

Debra Heffner:

Information is provisions for individuals to get better life, information these days can get by anyone from everywhere. The information can be a know-how or any news even restricted. What people must be consider when those information which is in the former life are challenging be find than now could be taking seriously which one works to believe or which one the actual resource are convinced. If you receive the unstable resource then you obtain it as your main information we will see huge disadvantage for you. All those possibilities will not happen throughout you if you take Modern Optical Spectroscopy: With Exercises and Examples from Biophysics and Biochemistry as the daily resource information.

Ella Hodge:

This book untitled Modern Optical Spectroscopy: With Exercises and Examples from Biophysics and Biochemistry to be one of several books this best seller in this year, that's because when you read this reserve you can get a lot of benefit in it. You will easily to buy this kind of book in the book shop or you can order it by way of online. The publisher of the book sells the e-book too. It makes you quicker to read this book, because you can read this book in your Smartphone. So there is no reason to you to past this reserve from your list.
